

Portable Submersible Non Clog Manhole Pumps

Compact. Rugged & Reliable pumps for Cleaning of Sewer Manhole

Frequent clogging of the sewer systems due to sedimentation of mud, sludge, rags, plastics, cotton waste etc & the consequent flooding of the public roads / public places is a perennial problem. Periodic cleaning of the sewers is essential - In absence of a better alternative; traditionally this is done by:

- firstly dewatering the sewer (via means of Conventional Suction lift "Mud" pumps which cannot lift blockage causing solids) & then
- workers enter the sewer through manholes to clean up the sedimentation - this is risky as extremely fatal toxic gases (*methane, etc*), biological wastes, etc. lead to infections & even deaths!

Aqua's Portable Submersible Non Clog Manhole Pumps are specially designed to tackle this problem. They handle large quantities of solids thereby accomplishing dewatering as well as desilting ! During emergencies like faults in pumping stations, natural calamities, floods, pipe line bursts, channel blockages, etc. these pumps have proven to be a boon to municipal authorities.

- No need to enter the manhole !
- Dewateres as well as Desilts !
- No health hazards
- Plug & Play !
- Can be run vertically or horizontally !
- Unlike conventional "Mud pumps" it can handle much higher concentration of solids due to submerged suction & special wide passage impeller (*handles upto 100mm solids*)
- Agitator (*optional*) churns out toughest sedimentations.
- Zero Suction - no Priming required.
- Zero Maintenance !
- Rugged cast iron construction withstands rough handling.
- Wear resistant mechanical sealing.
